

## Results - Call 2007

The second call was launched in January 2007. In continuation of the first call, the Transnational Call 2007 of MNT ERA-Net was again focusing on proposals for commercialisable R&D projects. All MNT topics were considered for support and project consortia consisting of at least two parties from two different participating countries/regions were invited. A total of 59 pre-proposals were submitted, requesting a total grant of around 36 Meuro. The consortia brought together around 196 project participants from 20 European countries and regions (Fig. 1).

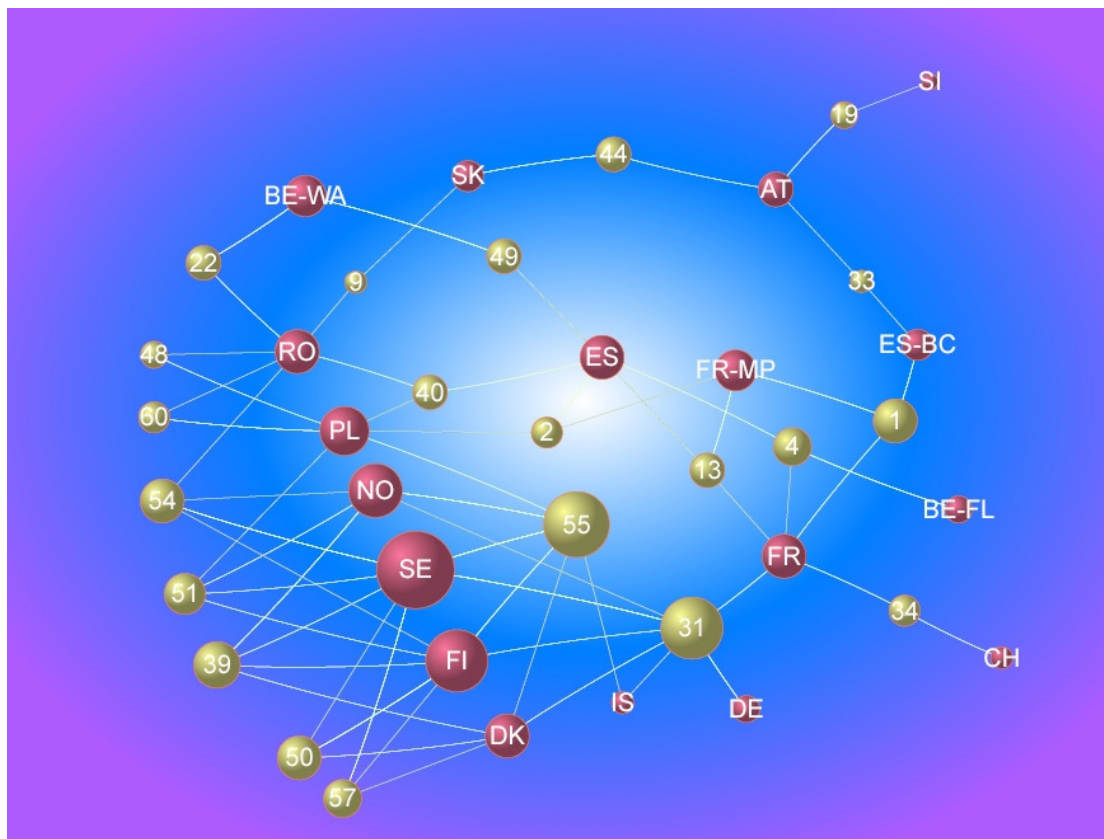

Figure 1: Networking of the national/regional projects

Out of the 59 pre-proposals (with 36 submitted as full proposals in the second stage) 21 projects were selected for funding by the respective national/regional funding bodies. The call was well covered by top proposal and partnerships were balanced, with consortia that are smaller than in the Framework Programme, and consist of both well known and new players (Fig.2).

Type of organisations, full proposals call 2007

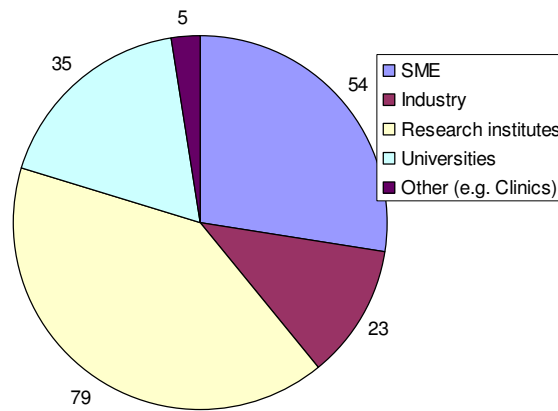

Figure 2: Type of organisations applying in the Call 2007

The projects address a broad range of new functionalities and applications in MNT with nanostructured materials, microsystems and micro- and nanoelectronics being the dominant topical fields (Fig. 3).
